Hypergate

Hypergate
Authenticator

Hypergate Authenticator delivers a seamless and secure Single Sign-On solution integrating directly with Active Directory. The solution leverages the industry standard Kerberos to provide the best possible user experience without compromising on security. Enabling SSO specifically with Android Enterprise which otherwise is not available.

Microsoft Intune

Benefits

• Improve the user experience through seamless Single Sign-On

• Increase security

• Reduce support costs with the help of the password reset and password change functionality

• Reduce setup and operation costs by leveraging the exact same infrastructure computers use

• Builds on top of Kerberos - a battle proven authentication protocol

• No architecture changes needed, no need for a backend component

• Works in background - no interaction with the application needed

• Integrate your company Applications with Hypergate

Features

• Kerberos authentication on Android Enterprise: Username and password or even certificate based authentication

• Kerberos based Seamless Sign On for Android Enterprise

• Password reset functionality

• Password expiration functionality - Change password when it expired directly on your device

• EMM agnostic

• Android device agnostic (Samsung and Android Enterprise capable devices)

• Integrates with all webview enabled applications without any additional changes

• Open source SDK for Java, Kotlin, Cordova available on GitHub

Reduce Costs

Reduce operational and support costs by reusing the existing Single Sign On infrastructure already used by computers. Hypergate Authenticator works with the battle tested Kerberos protocol to authenticate with your Enterprise services and apps. Enable your users with Kerberos authentication by simply pushing Hypergate Authenticator on their device.

Increase Security

Hypergate Authenticator is built using the robust Kerberos protocol which is the industry standard when it comes to secure authentication. SPNEGO/Kerberized web services are consumed seamlessly using one-time tokens avoiding the threat of replay attacks.

Provide Better User Experience

With the support of certificate-based authentication the user receives not only a seamless, but also more secure way to access sensitive enterprise data. Hypergate Authenticator is built using standards making it compatible out of the box with native applications like Google Chrome.

Truly Mobile

The modern workplace cannot ignore mobile anymore, but what if you want to go one step further and provide a mobile only workplace? Hypergate Authenticator allows your users to change or reset their expired passwords, no computer needed – ever. This is a huge cost saver and allows for more flexibility when it comes to planning your mobile strategy. Calculate your reset costs now: hypergate.com/cost-calculator/

Success Story with Jefferies

Jefferies is a U.S financial services organization and investment bank with 5000 Employees

Listed as a Fortune 500 company

85% of their work devices are employee-owned (BYOD)

Jefferies did a Success Story with Hypergate and Gooogle

Uses Hypergate Authenticator to provide seamless access to company resources.

When it comes to accessing legacy apps, Android Enterprise works alongside a solution from Hypergate that provides on-premise Single Sign-On authentication to Jefferies' Windows authentication infrastructure. This allows Jefferies to support a hybrid cloud environment and ensure that the user experience is seamless. By enabling the BYOD fleet with SSO, Jefferies enables its employees secure access to corporate resources which leads to a high level of employee efficiency.
