Benefits

- Makes use of existing Infrastructure (SMB/ CIFS) with minimal to no changes needed
- Strictly follows the Google Storage best practices for the best possible user experience.
- Integrates into the system file picker, therefore files can be accessed from apps like Gmail or Outlook without the need for app switching
- Use the existing security protocol on Android Enterprise
- Improve company's enterprise mobility strategy by leveraging a seamless mobile experience
- Developed for Android Enterprise
- Reduce training requirements
- Cost effective by not relying on infrastructure changes

Features

- All file types supported - docx, xlsx, pdf, video, psd etc. through the use of their native Applications like Microsoft Word, Excel etc.
- Access on-premise data securely on your mobile phone with the same file permissions
- Fully integrates into the Android standard file access like MS Onedrive for the simplest user experience
- EMM agnostic
- Android device agnostic (Samsung and Android Enterprise capable devices)
- Available as standalone or fully Hypergate Authenticator enabled solution
- Integrates into all solutions that offer SMB like Microsoft Sharepoint

Overview

Ubiquitous data access has become a necessity - Your employees must be able to obtain and share all the relevant data with their team members with ease.

Hypergate Files is a flexible and secure network drive explorer solution for Android which is deeply integrated into the Android operating systems by making use of the new storage provider architecture, allowing for a truly seamless file explorer experience. Word documents open in Microsoft Word, presentations in Powerpoint etc.

All file types are supported by their native applications without a special viewer, editor or a custom implementation, just pure usability. Offering your company the security against unauthorized access and at the same time the flexibility guaranteeing the highest efficiency.

Reduce Costs

With Hypergate Files there is no need for your employees to change their workflow at all, they can use the intended applications to open files and can attach them to an email with ease.

Seamless Integration

Hypergate Files avoids transition friction or time consuming support by using the existing native apps, all without any changes to the existing infrastructure.

Accessible Anywhere

With Hypergate Files you can access your data securely from anywhere, even in a BYOD environment, as it is device agnostic.

Native Security

Hypergate Files uses the new Android storage provider framework, a functionality provided directly by the operating system.

Hypergate
Authenticator

Hypergate Files becomes even more powerful if paired up with Hypergate Authenticator, stripping away the manual user authentication for a complete seamless access. Hypergate Authenticator delivers a seamless and secure Single Sign-On solution integrating directly with Active Directory. The solution leverages the industry standard Kerberos to provide the best possible user experience without compromising on security. Enabling SSO specifically with Android Enterprise which otherwise is not available.
